

Freshfields Carbon Footprint Report

Global Verification Statement
May 2025 – April 2026

August 2026

FRESHFIELDS

Statement of verification

Freshfields LLP
100 Bishopsgate,
London,
EC2P 2SR

19 August 2026

Scope

Freshfields LLP (henceforth referred to as Freshfields) engaged Carbon Footprint Ltd to verify its carbon footprint assessment and supporting evidence for the period **1st May 2025 to 30th April 2026**. Freshfields is responsible for the information within the GHG inventory. The responsibility of Carbon Footprint Ltd is to provide a conclusion as to whether the statements made are in accordance with the GHG Protocol.

Methodology

The verification was led by Joe Murray, Senior Environmental Consultants, Carbon Footprint Ltd. Carbon Footprint Ltd completed the review in accordance with the [‘ISO 14064 Part 3 \(2019\): Greenhouse Gases: Specification with guidance for the verification and validation of greenhouse gas statements’](#). The work was undertaken to provide a limited level of assurance with respect to the GHG statements made. Carbon Footprint Ltd believes that the review of the assessment and associated evidence, coupled with this subsequent report, provides a reasonable and fair basis for our conclusion.

The following data was within the scope of the verification (below shows the post-audit results):

Scope	Element	Location-based (tCO ₂ e)	Market-based (tCO ₂ e)
1	Company-owned vehicles, natural gas consumption, refrigerant loss & other fuels.	436.30	436.30
2	Purchased electricity, district cooling & district heating.	5,147.32	523.44
3	Purchased goods & services, upstream transportation and distribution, business travel (air, taxi, hire cars, rail, grey fleet), water (and wastewater), waste, paper, employee commuting, electricity and district heating & cooling transmission & distribution, and well-to-tank (WTT) emissions. ¹	50,848.95	50,848.95
Total		56,432.57	51,808.69

The table below shows the results of Freshfields’s environmental KPIs that have been audited by Carbon Footprint Ltd.

Paper consumption:	84.89 metric tonnes
Water consumption:	49,737.12 m ³
Waste disposal:	735.55 metric tonnes

During the 2025/26 assessment period, 99.9% (17,000 MWh) of the total electricity purchased globally was from renewable sources. This covers offices in Asia (excluding Bahrain), Europe (excluding Dublin) and the USA.

¹ Additional optional Scope 3 categories assessed: hotel stays (412.47 location-based & market-based tCO₂e) and home-working employees (48.98 location-based & market-based tCO₂e).

Assurance opinion

Based on the results of our verification process, Carbon Footprint Ltd provides limited assurance of the GHG emissions statement, **and found no evidence that the GHG emissions statement:**

- is not materially correct and is not a fair representation of the GHG emissions data and information;
- has not been prepared in accordance with the GHG Protocol.

It is our opinion that Freshfields has established appropriate systems for the collection, aggregation and analysis of quantitative data for determination of GHG emissions for the stated period and boundaries.
