Adding a website to the home screen of any smartphone or tablet

iOS

1. Open the browser by tapping on the Safari icon, typically located on your home screen. The main browser window should now be visible.
2. Navigate to the web page that you wish to add as a home screen icon.
3. Tap on the Share button at the bottom of the browser window. It’s represented by a square with an up arrow in the foreground.
4. The iOS Share Sheet will now appear, overlaying the main browser window. Select the option labeled Add to Home Screen.
5. The Add to Home interface should now be visible. Edit the name of the shortcut icon you are creating. This text is important: It represents the title that will be displayed on the home screen. Once you are done, tap the Add button.
6. You will be taken back to your home screen, which now contains a new icon mapped to your chosen web page.

Android

1. Launch Chrome for Android and open the website or web page you want to pin to your home screen.
2. Tap the menu button and tap Add to home-screen.
3. You’ll be able to enter a name for the shortcut and then Chrome will add it to your home screen.
4. Other popular Android browsers also offer this feature.
